

## Magma Grill Btu Ratings

- As a rule, Magma does not promote the Btu rating of our grills, as it indicates only the fuel consumption and not necessarily the actual heat output performance to the cooking surface.
- Analogous to automobiles that use a large quantity of gas while producing very little horsepower, most grills are rated with high Btu output, but are inefficient in directing the energy to the cooking surface.
- Magma grills are engineered to be extremely fuel efficient, as fuel is limited to what is carried on board.
- Magma Btu ratings are as follows:
